

Goals*

The K-12 Math curriculum addresses the following goals:

GOAL #1: Use patterns and functions to describe data and physical phenomena to solve problems.

GOAL #2: Demonstrate an understanding of the relationship between the base ten number system and fractions, decimals, percents, and ratios.

GOAL #3: Use geometric measurements and relationships to solve real world problems.

GOAL #4: Analyze information in order to make reasonable predictions and decisions, using data which they have collected, organized, and displayed appropriately.
